

StyleLite® TruMatte Cleaning Guide

Step 1:

Use warm soapy water and a clean microfiber cloth to wipe the surface sheet in a back-and-forth motion until the mark is removed. Dry gently with a clean microfiber cloth.

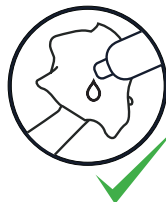

Step 2:

Use Matte Maxx® regularly to maintain your StyleLite finish.

DO NOT APPLY THE PRODUCT DIRECTLY TO THE SHEET. Apply the recommended cleaning product to a damp microfiber cloth and then clean the sheet as instructed in step one.

NEVER USE:

- × Edge band glue cleaner*
- × Acids (citric, hydrochloric, sulfuric...etc.)
- × Products containing solids or abrasives (oven cleaner, drain cleaner, bleach, toothpaste...etc.)
- × Alcohols (ethanol, methanol, highly concentrated IPA, etc.)
- × Nail polish remover (acetone and acetone-free)
- × General cleaner (e.g., BAM)
- × Synthetic oils/lubricants
- × Disinfectant sprays (e.g., Lysol, Clorox, Glen 20)
- × Brushes, scourers, or abrasive cleaning clothes
- × Abrasive cleaners
- × Thinners or methylated spirits

*Edge band cleaners (ABS cleaners) are to **never be used** on StyleLite, including during edge-banding. The protective film adhered to the StyleLite sheet **must stay on during edge-banding**. The film must also stay on during all processing of the sheet until it is fully installed to prevent scratching.

This is not a comprehensive list of unsuitable cleaning products, and various other chemicals are not compatible with StyleLite products.

Step 3:

If the mark persists, you can use one of the cleaning products listed below.

ALWAYS wipe the face sheet down with a damp clean microfiber cloth after you are finished in order to remove residue that could damage the sheet.

- ✓ Sugar soap
- ✓ Low odor kerosene
- ✓ 9:1 water to Isopropyl Alcohol (IPA) mix.
